PrizmDoc | Enablement Services

Get Your Integration Up and Running Faster

Accusoft's Enablement Services help you get a head start on implementing your PrizmDoc™ product.

If you have development resource or bandwidth constraints, let Accusoft be a part of your team. Our experts work closely with you to understand your specific needs and develop an implementation plan and training to ensure current and future success.

1

Have Your People Call Our People

Whether you're integrating PrizmDoc Viewer or PrizmDoc Editor, we're here to help determine the best implementation approach to get up and running on-time, on-budget, and on-target.

2

Select Your Product & Your License

Our experts begin by talking through your feature requirements. We want to understand your system architecture, and how the product will be used, so we can provide the best options.

3

Learn Product and Integration Best Practices

Once we develop an enablement plan together, we'll meet you either remotely or on-site for customized, targeted integration guidance, product training, and "over-the-shoulder" development assistance.

accusoft®

The Accusoft Approach to Enablement Services:

Phase One

The Analysis:

We perform system analysis to determine the best approach to implementing the PrizmDoc product into your environment, considering factors like system architecture, server environment, and data workflow. After this is complete, you will receive detailed instruction and assistance for planning and architecting solutions based on performance and high availability needs.

"The hands-on, consultative approach really made the difference when merging PrizmDoc into our environment."

- Current Enablement Services Client

Phase Two

The Training:

We customize our training to your specific needs with the goal of creating a strong foundation for future development and ongoing system maintenance. You will receive targeted guidance for creative feature implementation to solve your unique challenges. Services are typically delivered in-person, hands-on, and on-site. However, we can set up a remote training if that works best for you. We recommend that multiple developers from your team attend to enable open communication between our teams.

During training, we will review:

System Architecture	Integration Strategy
Load Balancing	Service API
Product Security	Workflow Design
Server Sizing	Deployment
Viewer API	Custom User Interfaces

Key Benefits

Quicker Implementation

With experts at your finger-tips, you can easily get up and running in no time. Complete the integration faster with our experts by your side.

Customized to Meet Your Needs

From the first step through the entire training, we customize our approach to your specific situation. We develop a plan that fits your use case and your needs.

Long-Term Results

Your developers will leave the training more informed in a better position to maintain and enhance the integration in the future.

Optimum System Architecture

We provide architecture analysis and guidance that will ensure optimum use of hardware and platform, so you never need to worry.
