PrizmDoc Cells

Browser-Based Spreadsheet Viewing & Editing

Natively support XLSX Files in your existing application.

The Challenge

Spreadsheets are an integral part of several industries, but they come with their own unique challenges. Whether it's version control, data security, or user error, spreadsheets can cause headaches for companies large and small. Spreadsheets have the potential to become huge business vulnerabilities, especially when users choose convenience over the protection of their information. It doesn't matter if the users collaborate on files via email or online solutions like Google Sheets or Office 365; if a spreadsheet can be copied to a desktop and reproduced, these problems still remain. ISVs need functionality that addresses these pain points for security-conscious users, without investing the time and effort to build it from the ground up.

The Solution

PrizmDoc Cells is a web-based spreadsheet viewer and editor designed to natively support XLSX files and easily integrate into your existing application or system solution. With PrizmDoc Cells, you can lock down access to proprietary spreadsheets, and still make them shareable online for users to perform calculations in an Excel-like interface. Don't let your customers become the next spreadsheet horror story. Eliminate Excel chaos with a secure web solution that separates business logic and calculations from user inputs and outputs. Provide superior deployment and accessibility without compromising security.

Key Benefits

No Microsoft Dependencies
Enable your application to import, edit, and export XLSX without dependencies on Excel.

Embed Anywhere
Securely embed spreadsheet data on any website, CMS, intranet, or portal.

Secure Proprietary Files
Remove end-user access to source files, encrypt data, and host it securely in your environment.

Remove Visibility into Underlying Logic
Separate proprietary business logic, formulas, and calculations from your user interface.

Streamline Version Control
Eliminate version confusion and error propagation with no client-side installs or downloads.

Get Started Fast
Start a fresh instance quickly with Docker, where everything you need is available in a container.

Make It Yours
Expand your solution by delivering new capabilities under your brand with white-labeling.

PrizmDoc Cells

With PrizmDoc Cells, you can enable your application to display XLSX documents as they would appear in the native application. Provide end-users with the ability to edit cell content like values and existing formulas, add new formulas, and recalculate dependent formulas.

You can also support protected sheets with locked/hidden cells, insert, delete, or resize rows and columns, change cell formatting, and display embedded graphics .... all without losing the integrity of your original file.
