PrizmDoc Private Cloud

Leverage the power of PrizmDoc within a secure private cloud environment.

The Challenge

You need viewing, conversion or other document processing tools incorporated into your application ASAP, but don't have the infrastructure in place to host it. Even if you did, you also don't have the extra development resources necessary to build these capabilities from scratch into your application, or even maintain them. The time and cost for both infrastructure and resources are beyond what is feasible in your roadmap. And the difficulties are compounded, if you are working in a regulated industry and need the security and performance of a dedicated and isolated infrastructure. So what do you do?

The Solution

Accusoft's privately hosted and managed PrizmDoc Private Cloud allows developers to quickly and easily integrate powerful document processing capabilities into their applications through a variety of flexible APIs. Deployed in a secure private cloud, the fully managed PrizmDoc Private Cloud guarantees data isolation, provides better resource allocation, and delivers more consistent performance for your application's document viewing, editing, and management needs.

Customize the configuration of your private cloud to match your unique requirements and make API calls from any platform in any available region around the world. The PrizmDoc Private Cloud offering is fully managed, so you'll always have access to the latest version of PrizmDoc. Without needing additional in-house resources for maintenance and version updates, it allows you to incorporate a vast array of document processing features into your web application without having to build that functionality from scratch or manage the infrastructure to support it. Not to mention, saving you resource costs and time! You'll also get access to an experienced support team that's committed to making your API integration a success at every opportunity.

PrizmDoc Features

Viewing: High-speed responsive rendering displays 100+ file types directly within browser-based web applications without any additional plug-ins or software.

Conversion: Quickly convert dozens of file types with full PDF support and high-fidelity MSO conversion for both Linux and Windows environments.

Annotation & Redaction: Mark up documents with multiple feedback tools and manually or automatically remove sensitive information to maintain security and confidentiality.

Private Cloud Benefits

Substantial Resource Savings: Experience time and cost savings without having to build functionality from scratch or manage the infrastructure to support it, and no additional in-house resources for maintenance and version updates.

Continuous Updates: PrizmDoc Private Cloud provides your application with security updates and new features when you need them.

Regulatory Compliance: Protect sensitive data within a fully secure private cloud that undergoes rigorous auditing to maintain HIPAA and SOC2 compliance.

Dedicated Support: Solve your business and document challenges with help from Accusoft's experienced team of cloud and document processing experts.
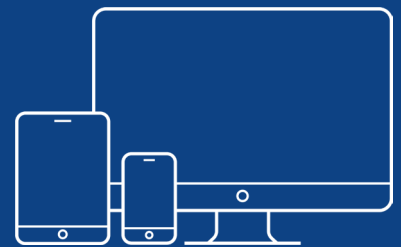

High Availability: PrizmDoc Private Cloud is built on a variety of AWS services to ensure transparency, scalability, and redundancy.

Where Flexibility Meets Control

■ Scale your document processing capabilities, with a fully managed, private, isolated infrastructure to meet SLA requirements, saving you time and money.

■ No need for in-house resources to maintain, so you are always on the most recent version.

■ Enhanced security and performance of a dedicated and isolated infrastructure.
